AIRCRAFT IN-FLIGHT ENTERTAINMENT SYSTEM WITH SOFT FAIL AND FLIGHT INFORMATION FEATURES AND ASSOCIATED METHODS

Abstract of the Disclosure

An aircraft in-flight entertainment system preferably includes, in one embodiment, a satellite ${\tt TV}$ receiver, at least one passenger video display 5 connected to the receiver, and a processor connected to the receiver for determining an undesired condition and for generating a substitute image on the passenger video display rather than permit display of an undesired image which would otherwise be produced. undesired condition may relate to a weak signal or 10 component malfunction. Accordingly, the undesired image may be an undesired default text message or a degraded picture image. Other embodiments of the inflight entertainment system are directed to providing a moving map image flight information channel integrated 15 with the programming channels of the system.
